

Environment / Out with the old grass, in with the new
Berkeley High students plant native grasses along the banks of Strawberry Creek on campus this week as part of a project to replace invasive plants with native species. The restoration work is part of an NSF-funded [GK-12 biodiversity project](#) that unites Berkeley grad students with local high school students. It is sponsored by a Chancellor's Green Fund Grant awarded by the Chancellor's Advisory Committee on Sustainability, and involves numerous campus and community partners. *(Photo by Steve McConnell / UC Berkeley)*
